

THE NEXT STEP IN
BLOCKCHAIN EVOLUTION

galaxa

SMART
SERVICES

DISTRIBUTED STORAGE & COMPUTE

Galaxa is the first cloud XaaS distributed storage and compute marketplace designed to address the unique requirements of enterprise customers for global on-demand, hyper-secure, hybrid and multi-cloud, storage and compute services, powered by the security token called GAAX.

GALAXA

Storage and compute marketplace

MARKETPLACE

Offers Storage, Compute and additional value-added services

Uses reputation system for automatic evaluation of Provider performance

Allows providers to publish details of their services in the Service Registry

Introduces the Proof of Provided Service consensus model based on Proof of Authority and service measurement

Implements measures to insulate marketplace participants from cryptocurrency volatility

Built on a permissioned enterprise-grade blockchain with governance and oversight to ensure regulatory alignment

STORAGE SERVICE

Distributes data across multiple storage providers

Provides strong data security using encryption and data fragmentation such that no single storage provider has access to data

Provides high levels of data durability: data is recoverable even with the loss of some storage providers

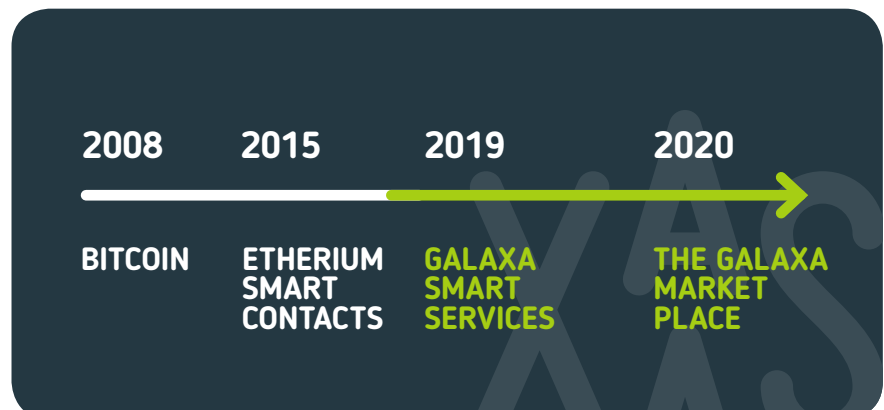

COMPUTE SERVICE

General purpose compute infrastructure

Orchestrates application execution across multiple providers

Runs cloud-native applications without requiring them to be built specifically for Galaxa

Isolates customer applications and data from providers and other customers

WHY Galaxa?

PROVEN TECHNOLOGY

Underlying technology is based on proven enterprise-grade technology from Leonovus Inc. with over 10 years of product development completed, \$29M invested, 62 customers engaged with 7 issued patents, 5 pending and over 300 patent claims.

10

Years of product development completed

29

\$ Million invested

62

Customers engaged
Revenue starts Q2 2019

300

Patent claims

ADDRESSABLE MARKET

Enterprises can easily choose, transition and/or aggregate between providers. Pricing will be visible and more competitive, more storage and compute players with available resources will be able to add their services to satisfy the over 30% CAGR in data storage.

ADVISORY BOARD

All participants in the Galaxa marketplace expect a sound, robust and secure financial transactional system, therefore an independent advisory board will be created to provide governance and oversight required by the enterprise participants.

LAUNCH

GAAX Security token

GAAX is the security and utility token of Galaxa marketplace. The GAAX holders will receive monthly distributions from the marketplace fees, recognizing the investment made by GAAX owners. This is what provides GAAX with SECURITY TOKEN status.

ENTERPRISE CUSTOMERS

Leverage multiple and disparate cloud providers through one common marketplace.

Avoid vendor lock-in.

Use enterprise-grade services backed by strong governance.

DEVELOPERS

Deploy new services using infrastructure provided by a shared economy.

List their services on the marketplace differentiated and priced as they see fit.

Pay 11% marketplace transaction fees.

PROVIDER

Sell infrastructure services on a common, open market.

Differentiate based on unique aspects of their data centres (geo-location, certifications, etc.)
